

THE CLEAR PERFORMER

Super Refined Chlorinated Paraffin

About **SUNTEK**

At Suntek, it all started with a humble beginning as a trading company of Chlorinated Paraffin, 25 years ago. Today it is one of the leading producers of Chlorinated Paraffin Plasticizer (CPP) in India, with an installed capacity of over 48,000 MT of CPP and approx. 90,000 MT of Hydrochloric Acid (HCL). Promoted by entrepreneurs with rich experience and expertise in Industrial chemicals, over the years Suntek has made a strong foot hold in this segment of the market.

With customer focussed approach, Suntek has been relentlessly working for value upgradations and innovations, through research, to deliver products with consistency and improved quality.

Multi located manufacturing facilities

Presently Suntek has four strategically located state-of-the-art plants in India, 2 in Jharkhand, 1 in Uttar Pradesh and 1 in Orissa, that has enabled the company to cater to various industrial customers across the country. In addition these units are located next to Grassim Caustic Soda plants from where the supply of chlorine (a key constituent of CPP) is done directly through pipelines rather than tonners. This has ensured enhanced quality of raw material with lesser logistics cost, enabling Suntek to optimise its production cost and subsequent price for the end consumer.

Glass-line Reactors

Suntek also has been the pioneers to introduce Glass-line reactors to the industry, to ensure better quality end products. With a total of 28 reactors today, Suntek has become one of the largest producer of CPP in the India. With ever increasing demand of Suntek products, the company plans to double its capacity in a couple of years.

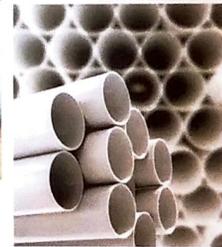

Quality you can trust

To produce top quality colourless product, the company ensures that it procures raw material from the right source. That is why the basic raw material of CPP is procured from Reliance Industries, that produces the best quality raw material of CPP. Over and above each batch of finished product goes through rigorous multi stage quality checks, before they are rolled out of its plants.

Product for wide applications

Suntek products are the first choice of leading manufacturers in various rubber and plastic industries like

- PVC tubing pipes for irrigation/Gardening
- Manufacturing of PVC Compounds
- Flame Retardants
- Rubbers Chemicals
- Paints Industries (Fire Proof Paints)
- Manufacturing of PVC Compounds, Wire & Cables, Toys, Footwear
- PVC Rexine, PVC Flooring, Films/ Sheets

Suntek offers Chlorinated Paraffins (CPP) in various grades with percentage of chlorination ranging from 40% to 65%.

Range

At present Suntek Industries produces the conventional Classic KG 250 range and plans to introduce a brand new series by the name of **Suntek Supreme KG 250**, with an international technical collaboration from some leading companies in this field, from Germany and China. This premium series will provide much better performance parameters in terms of its thermal stability and higher thermal decomposition.
